

## Semi Automatic Water Softener Valve

# SOLO VALVES

*From 1979*

## **Introduction:**

Solo Valves are manually operated, single-lever control, cast iron valves designed for commercial and industrial water treatment systems (Water Softeners).

Three operating positions accommodate backwash, brine rinse and service. A built-in ejector draws regenerant on ion exchange units.

Semi Automatic Valves are used to control softening and filtration in water softeners and filters devices and by putting valve lever on the service mode, backwash and injection, provides the ability to regeneration resins, and also to transfer soft water to system.

Maximum working pressure is 100 psi (7 bar) and maximum temperature is 140°F (60°C).

## **Sizes Available:**

Solo Valves are available in 3/4 , 1 , 1 1/4 , 1 1/2 , 2 , 2 1/2 inch.

## **Material:**

Body: Cast Iron

Internal Plate: Brass

Internal Shaft: Stainless Steel

## **Special Services:**

- \* Guarantee & Warrantee
- \* After Sales Services
- \* Spare Parts
